

Reviews (Round 2): Motion-driven enhancement of a lower region cue in depth perception (#8786)

Edited by: Yuki Yamada, Kyushu University, Japan

Review by: R.J. van Lier, Radboud University, Netherlands

For author and editor

This manuscript seems now ready for publication.

A few small errors on page 5

* "van Lier et al (209)" should be: "van Lier et al (2009)" <<so: chance 209 into 2009>>

* The sentence "It appeared that pink colors outside the subsequently presented outline, induced a pink color inside that." misses the last word. It should be:

It appeared that pink colors outside the subsequently presented outline, induced a pink color inside that outline. <<so add "outline">>

Recommendation: Accept Submission

Review by: Rumi Tokunaga, Chiba University, Japan

For author and editor

The author has addressed all of the major comments and some of the minor comments.

In the static figure, Movie #1d, the pale green sectors are slightly out of the outer circle and need to be corrected.

I have no additional comments.
